Bases, Exponents and Powers

Introduction Part 1 Part 2 Part 3 Conclusion

Exponents are Repeated Multiplication.
 2^3 is a power. Think of it as repeated multiplication.

When you write: 2^3
 You say: '2 to the third', but you mean: '2 multiplied by itself 3 times'.

power: includes the base and the exponent
 5^6
 base
 $= 5 \times 5 \times 5 \times 5 \times 5 \times 5$
 $= 15625$

Adjust the exponent and base values by using the sliders.

Absolute Value

The absolute value of a number is the distance between 0 on a number line. In other words, the distance between a (any) real number and zero is called the absolute value. It's sometimes called modulus, and is always represented by the two vertical lines that surround it.

The absolute value of a real number is always POSITIVE.

For example, -15 and 15 are both equal to 5.

Number line representation:
